Scientific espionage, open exchange, and American competitiveness

Prof. Xiaoxing Xi
Physics Department
Temple University

Abstract

As the federal government warns universities and colleges about the risk of China to academia in the United States, professors, scientists, and students of Chinese ethnic origin are under heightened scrutiny. In 2015, I became a casualty of this campaign despite being innocent. This experience gave me insights into the challenges Chinese scientists face and the immediate threat to the open environment in fundamental research on university campuses. In this talk, I will share with the audience my personal experience and the thoughts on the urgent need for the scientific community to speak up to defend liberty and safeguard America's research enterprise.
